Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

```
growth factor (VEGF) proteins (AAB28233-B28236). The present sequence is one such mutant. The mutant VEGF proteins have selective binding affinity for kinase domain region (KDR) receptor. The mutant VEGF proteins are useful for detecting KDR receptors for diagnostic purposes. In addition, the mutant VEGF proteins are useful for atimulating vasculogenesis or anglogenesis by exposing mammalian cells expressing a KDR receptor to the mutant proteins to treat trauma to the vascular network caused by
                                                                                                                                                                                                   Vascular endothelial growth factor variant useful for detecting kinase
                                                                                                                                                                                                                      domain region receptor for diagnostic purposes, comprises one or more amino acid mutations in native VEGF and has selective binding affinity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         surgical incisions, wounds, lacerations, penetration of blood vessels
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Note: the present sequence is not shown in the specification but is derived from the wild-type human VEGF sequence given in Fig 1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Human; vascular endothelial growth factor; VEGF; mutein; mutation; kinase domain region receptor; KDR; vasculogenesis; anglogenesis; surgical incision; wound; laceration; blood vessel; ulcer.
                                                                                                                                                                                                                                                                                                                                            The present invention relates to mutant human vascular endothelial
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö

growth factor (VEGF) proteins (AAB28233-B28236). The present sequence is one such mutant. The mutant VEGF proteins have selective binding affinity for kinase domain region (KDR) receptor. The mutant VEGF proteins are useful. for detecting KDR receptors for diagnostic purposes. In addition, and angiogenesis by exposing mammalian cells expressing a KDR receptor to the mutant proteins to treat itrauma to the vascular network caused by surgical incisions, wounds, lacerations, penetration of blood vessels
                                                                                                                                                                                                   Vascular endothelial growth factor variant useful for detecting kinase
                                                                                                                                                                                                                          domain region receptor for diagnostic purposes, comprises one or more amino acid mutations in native VEGF and has selective binding affinity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human; vascular endothelial growth factor; VEGF; mutein; mutation;

proliferative retinopathies; age-related macular degeneration, rheumatoid arthritis and psoriasis. The polypeptides of the invention exhibit unique receptor binding profiles compared to known naturally occurring VEGFs.
                                                                                                                                                                                                                                                                                                                                           The present invention relates to polypeptides that bind cellular receptors for vascular endothelial growth factors (VEGFs), the polynucleotides encoding them, and their use for identifying agents that modulate interactions between VEGFs and their receptors. VEGFs and their receptors play an important role in vasculogenesis, the development of the embryonic vasculature from early differentiating endothelial cells and angiogenesis, the process of forming new blood vessels from pre-existing ones. Modulators of interactions between VEGF and its receptors may be used to treat dysfunction of the endothelial cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           regulatory system. Such disorders include cancers, abnormal angiogenesis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Vascular endothelial growth factor; VEGF; angiogenesis; wound healing;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  oone growth; osteoporosis; osteoarthritis; bone reconstruction; ulcer; lesion; injury; trauma; periodontal condition; protein therapy; human.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   RESULT 5
                                                                                   The present invention relates to mutant human vascular endothelial growth factor (VBGF) proteins (AAB28233-1828236). The present sequence is one such mutant. The mutant VBGF proteins have selective binding affinity for kinase domain region (KDR) receptor. The mutant VBGF proteins are useful for detecting KDR receptors for diagnostic purposes. In addition, the mutant VBGF proteins are useful for stimulating vasculagenesis or and longenesis by exposing mammalian cells expressing a KDR receptor to the mutant proteins to treat trauma to the vascular network caused by
                                                                                                                                                                                                                                                                                         Vascular endothelial growth factor variant useful for detecting kinase domain region receptor for diagnostic purposes, comprises one or more amino acid mutations in native VEGF and has selective binding affinity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              surgical incisions, wounds, lacerations, penetration of blood vessels
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Note: the present sequence is not shown in the specification but is derived from the wild-type human VEGF sequence given in Fig 1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Human; vascular endothelial growth factor; VEGF-A; vasculogenesis; angiogenesis; blood vessel; cancer; proliferative retinopathy; psoriasis; age-related macular degeneration; rheumatoid arthritis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  .

The invention relates to a fusion protein comprising non-heparin binding vascular endothelial growth factor (VEGF) peptide portion and a non-VEGF peptide portion useful for promoting angiogenesis and/or bone growth in mammalian host. The fusion protein is useful for promoting angiogenesis, wound healing and bone growth. Compositions containing bone growth or osteoarthrits, to improve poor bone healing, to promote implant integration and function of artificial joints and to facilitate bone reconstruction. They can also be used to treat e.g. ulcers, lesions, injuries, burns, trauma, periodontal conditions, lacerations and other sequence is human VEGF-A receptor binding domain.

Polypeptides that bind cellular receptors for vascular endothelial growth factors, polynucleotides encoding them

The present invention relates to polypeptides that bind cellular receptors for vascular endothelial growth factors (VEGFS), the polynucleotides encoding them, and their use for identifying agents that modulate interactions between VEGFS and their receptors. VEGFS and their receptors play an important role in vasculogenesis, the development of the embryonic vasculature from early differentiating endothelial cells and angiogenesis, the process of forming new blood vessels from pre-existing ones. Modulators of interactions between VEGF and its Example 4; Page 115; 261pp; English

regulatory system. Such disorders include cancers, abnormal angiogenesis, proliferative retinopathies, age-related macular degeneration, rheumatoid arthritis and psoriasis. The polypeptides of the invention exhibit unique receptor binding profiles compared to known naturally occurring VEGFS. The present sequence represents VEGFR-1 binding epitope from human angiogenesis; blood vessel; cancer; proliferative retinopathy; psoriasis; age-related macular degeneration; rheumatoid arthritis; cardiovascular; VEGF-C; mutant; mutein. The polypeptides of the invention exhibit unique receptor binding profiles compared to known naturally occurring VEGFs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           receptors for vascular endothelial growth factors (VEGFS), the polynucleotides encoding them, and their use for identifying agents that modulate interactions between VEGFS and their receptors. VEGFS and their receptors play an important role in vasculogenesis, the development of the embryonic vasculature from early differentiating endothelial cells and angiogenesis, the process of forming new blood vessels from pre-existing ones. Modulators of interactions between VEGF and its receptors may be used to treat dysfunction of the endothelial cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               system. Such disorders include cancers, abnormal anglogenesis,
receptor binding profiles compared to known naturally occurring VEGFs. The present sequence represents the polypeptide encoded by human VEGF-A/VEGF-C hybrid construct clone 12-5.

The polypeptides of the invention exhibit unique
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention relates to polypeptides that bind cellular receptors for vascular endothelial growth factors (VEGFS), the bolynucleotides encoding them, and their use for identifying agents that modulate interactions between VEGFS, and their receptors. VEGFS and their receptors, play an important role in vasculogenesis, the development of the embryonic vasculature from early differentiating endothelial cells
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                disorders include cancers, abnormal angiogenesis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     occurring VEGFs
                                                                                                                                                                                     Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     and anglogenesis, the process of forming new blood vessels from pre-existing ones. Modulators of interactions between VBGF and its receptors may be used to treat dysfunction of the endothelial cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Polypeptides that bind cellular receptors for vascular endothelial growth factors, polynucleotides encoding them

VEGF is an angiogenic factor. VEGF proteins are used for the prevention or repair of injury to blood vessels or associated nonvascular tissues (served hyp the blood vessels) and for the prevention and repair of vascular injury associated with microvascular angiopathy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          endothelium injury, acute respiratory distress syndrome, toxic alveolar injury, pneumonia, pulmonary emboli, birth prematurity disorders, wounds, allergic reactions, hypersensitivity, autoimmune diseases, organ transplants, focal glomerul, sclerosis, and amyloidosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         blood vessel injury; vascular injury; microvascular angiopathy;
thrombotic microantiopathy; kidney disease; heamolytic uremic syndrome;

platelet aggregation; thrombosis; preeclampsia; sepsis; pancreatis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Novel methods and compositions for the prevention and treatment of microvascular angiopathies by administration of angiogenic factors such as vascular endothelial growth factor (VEGF)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Human; vascular endothelial growth factor; VEGF 110; angiogenic factor;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             hypercoagulable states, platelet activation or aggregation, thrombosis, preeclampsia, thrombotic thrombocytopenia purpura, disseminated intravascular coagulation, sepsis, pancreatis, acute renal failure, myocardial infarction, ischemic bowel disease, transient ischemic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          particularly thrombotic microangiopathy. The proteins methods may also be used for the prevention and treatment of kidney diseases associated with injury to, or atrophy of, the vasculature of the glomerulus and interstitum. Conditions which may be treated include haemolytic uremit syndrome, toxic shock syndrome, venom exposure, chemical exposure,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              stroke, hypoxia or hypercapnia or fibrosis arising from lung

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      for treating hypertension (especially sait-dependent hypertension)
Administration of VGEF promotes angiogenesis and/or vascular or
applicaty permeability. The method is also useful in treating
disorders related to abnormal transport of solutes across endothelial
cells. Such disorders include the treatment or prevention of kidney
disease associated with impaired filtration or excretion of solutes;
the treatment or prevention of diseases of the central nervous system
associated with alterations in cerebrospinal fluid, e.g. stroke,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        or prevention of hypoxia or hypercapnia or fibrosis arising from accumulation of fluid secretions in the lungs, e.g. acute respiratory
                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              from disordered transport of fluid and solutes across the intesting epithelium, e.g. inflammatory bowel disease, diarrhoea; treatment or prevention of ascites accumulation in the peritoneum; enhancement of efficacy of solute flux; preservation or enhancement of function of organ allografts; and treatment of cardiac valve disease. The specification describes peptides which bind to an anti-VEGF antibody or which bind to a kinase domain receptor (KDR). The peptides inhibit the binding of VEGF to KDR, and inhibit binding of anti-VEGF antibody to VEGF. The peptides are useful for inhibiting angiogenesis and for treating diseases including cancer, diabetic retinopathy, psoriasis, hemangioblastoma, and Kaposi's sarcoma
sequence is the native human vascular endothelial growth factor NVGEFilo. The activity of VGEF is mediated by interaction with specific receptors on target tissues, most notably the vascular endothelium. VGEF exists as five different length monomer chains due to alternative splicing of the VGEF RNA transcript.

biological activity of vascular endothelial growth factor by a Cys residue, for producing variant useful for treating ion, stroke, diabetes, lupus, glomerulonephritis, meningitis, tumor, pneumonia, infections -Enhancing biological hypertension, replacing

Disclosure; Fig 12; 62pp; English.

The present sequence is given in a specification relating to a method for enhancing the biological activity of a vascular endothelial growth factor (VEGF) originally having a cysteine residue at a position. 116 of the 121 amino acid native mature human VEGF (The method comprises eliminating the cysteine residue to produce a VEGF variant. The variant is useful for inducing analogenesis or vascular remodelling, for prevention or repair of injury to blood vessels, where injury is associated with haemolytic uraemic syndrome (HUS) or microvascular angiopathy such as thrombotic microangiopathy (TMA). The VEGF variant is also useful for treatment of essential hypertension in a patient. The variant is useful for treating coronary artery disease and/or peripheral arterial disease, to foster myocardial blood vessel growth and to improve blood flow to the heart. It is useful for the treatment and prevention of kidney diseases associated

yloidosis, glomerulonephritis, diabetes, systemic lupus erythematosus chronic hypoxia/atrophy. It is also useful in the preservation or endothelial cells such as meningitis, tumour, infections, disorders of bone growth, acute respiratory distress syndrome, toxic alveolar injury pneumonia, cystic fibrosis, inflammatory bowel disease, infectious with injury to, or atrophy of, the vasculature of the glomerulus and interstitium and for the treatment and prevention of acute renal fail myocardial infarction, ischaemic bowel disease, transient ischaemic enhancement of function of organ allografts and xenografts, and for treating disorders related to abnormal transport of solutes across attacks, stroke, hypoxia, hypercapnia, focal glomerulosclerosis, amyloidosis, glomerulonephritis, diabetes, systemic lupus erythe diarrhoea or cardiac valve disease.

New method, useful in treatment of salt-sensitive hypertension, comprises administration of a vascular endothelial growth factor to a patient -

Disclosure; Fig 11; 30pp; English.

VEGF110 is not one of the preferred VEGF molecules. The method can also be used to treat disorders relating to abnormal transport of solutes across endothelial cells, including treatment or prevention of kidney disease associated with impaired filtration or excretion by administering a VEGF in an amount effective to reduce the blood pressure of a salt-sensitive hypertension patient to a normal range. The VEGF is preferably hVEGF121 (see ABB76299) or a VEGF that has had its heparin-binding domain modified to render it incapable of binding heparin, e.g. by amino acid alteration. VEGF110 is not one of the preferred VEGF molecules. The method car distress ascites accumulation in the peritoneum as occurs in the failure of The present sequence is the protein sequence of human vascular endothelial growth factor 110 (hVBGF110). The present invention concerns methods for the treatment of salt-sensitive hypertension of solutes, central nervous system diseases associated with alterations in cerebrospinal fluid synthesis, composition or circulation including stroke, meningitis, tumour, infections, and disorders of bone growth, hypoxia or hypercapnia or fibrosis arising from accumulation of fluid secretions in lungs or impediments to their removal, including acute respiratory distress pulmonary air space, pulmonary endothelium injury, disordered transport of fluid and solutes across the intestinal epithelium, including inflammatory bowel disease, infections, diarrhoea, syndrome, toxic alveolar injury as occurs in smoke inhalation, pneumonia including viral and bacterial infections, surgical interventions, cystic fibrosis, and other inherited or acquired disease of the lung associated with fluid accumulation in the

failure

heart, liver and kidney, preservation and enhancement of function of organ allografts, and cardiac valve disease. SXCC

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

SwissProt\_41:\* Database :

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

FUNCTION: Growth factor active in angiogenesis, vasculogenesis and endothelial cell growth. It induces endothelial cell proliferation, promotes cell migration, inhibits apoptosis, and induces permeabilization of blood vessels. It binds to the VEGFRI/Fit-1 and VEGFR2/Rdr receptors and to heparan sulfate and

-1- FUNCTION: Growth factor active in angiogenesis, vasculogenesis and endothelial cell growth. It induces endothelial cell provides complexes and proliferation, promotes call migration, inhibits apoptosis, and induces permeabilization of blood vessels. It binds to the vegGFRI/Flt-1 and VEGFRZ/Kdr receptors and to heparan sulfate and

Submitted (MAR-1999) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: Growth factor active in anglogenesis, vasculogenesis and
endothelial cell growth. It induces endothelial cell
proliferation, promotes cell migration, inhibits apoptosis, and
induces permeablization of blood vessels. It binds to the
VEGFRI/Fit-1 and VEGFR2/Kdr receptors and to heparan sulfate and

"Purification and characterization of a naturally occurring vascular endothelal growth factor placenta growth factor heterodimer.";

J. Biol. Chem. 270:7717-773(1995).

-!- FUNCTION: Growth factor active in angiogenesis, vasculogenesis and endothelial cell growth. It induces endothelial cell growth. It induces cell midgration, inhibits apoptosis, and induces permeabilization of blood vessels. It binds to the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       IsoId=Pl6612-4; Sequence-vSP_004631;
TSSUE SPECIFICITY: Expressed in the pituitary, in brain, in particularly in supraoptic and paraventricular nuclei and the choroid plexus. Also found abundantly in the corpus luteum of the

SUBCELLULAR LOCATION: VEGF-A120 is acidic and freely secreted.
SUBCELLULAR LOCATION: VEGF-A120 is acidic and freely secreted.
VEGF-A164 is more basic, has heparin-binding properties and, although a signicant proportion remains cell-associated, most is freely secreted. VEGF-A188 is very basic; it is cell-associated after secretion and is bound avidly by heparin and the

-!- FUNCTION: Growth factor active in angiogenesis, vasculogenesis and endothelial cell growth. It induces endothelial cell prowth. It induces endothelial cell prowth. Promises cell migration, inhibits apoptosis, and induces permeabilization of blood vessels. It binds to the VEGFRI/FIt-1 and VEGFRZ/Kdr receptors and to heparan sulfate and
                                                                                                                                                                                                                                                               Isoid-000731-1; Sequence-Displayed;

TISSUE SPECIFICITY: In developing embryos, expressed mainly in the
                                                                                                                                 heparin (By similarity).
SUBUNIT: Homodimer; disulfide-linked. Also found as heterodimer with PIGF (By similarity).
SUBCELLULAR LOCATION: VEGF-1 and VEGF-2 are secreted while VEGF-3 remains cell-surface associated unless released by heparin.

Vascular endothelial growth factor A (VEGF-A) (Vascular permeability
                                                                                                                                                                                                                                                                                                                                                                                                        Submitted (JAN-1992) to the EMBL/GenBank/DDBJ databases.
--- FUNCTION: Growth factor active in angiogenesis, and endothelial cell growth. Induces endothelial proliferation and vascular permeability (By similarity).
--- SUBGNIT: Homodimer; disulfide-linked. Also found as heterodimer with PIGF (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            similarity).
SIMILARITY: BELONGS TO THE PDGF/VEGF FAMILY OF GROWTH FACTORS.
                                                                                                                                                                                                                                                                         Cavia porcellus (Guinea pig).

"Structure and expression of bovine VEGF:Family."
Structure and expression of bovine VEGF:Family."
Submitted (MAY.1997) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: Growth factor active in angiogenesis, and endothelial
cell growth, stimulating their proliferation and migration. It
binds to receptor VEGRP-1/FLTI (By similarity).
-!- SUBUNIT: Antiparallel homodimer; disulfide-linked. Also found as
heterodimer with VEGF/VEGF. (By similarity).
-!- SUBCELLULAR LOCATION: Secreted (By similarity).
-!- SIMILÂRITY: BELONGS TO THE PDGF/VEGF FAMILY OF GROWTH FACTORS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 i- FUNCTION: Growth factor active in angiogenesis, vasculogenesis and endochelial cell growth. It induces endochelial cell proliferation, promotes cell migration, inhibits applosis, and induces permeabilization of blood vessels. It binds to the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       TISSUE SPECIFICITY: Abundantly and equally expressed in heart and liver. In kidney glomeruli, brain and yolk sac, VEGF-166 is 5- to 10-times more abundant than VEGF-190.

DEVELOPMENTAL STACE: VEGF-166 is expressed early at day 1 and is upgraded during gastrulation. Expression of VEGF-190 is detectable

Listing first 45 summaries

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
